NORTHSIDE ENTERTAINERS COOPERATIVE, NAIJA

NEC NAIJA

COMPLETE WEBSITE & DIGITAL COOPERATIVE DEVELOPMENT ROADMAP

Production blueprint · Full-stack architecture · Skeuomorphic design system · 107-screen inventory

Technology: TypeScript · Next.js · SCSS · Supabase PostgreSQL · Resend · Cloudinary · Vercel

Version 1.0 | October 2026 | Scope: National website, member portal and multi-level administration

00 / Executive Direction

NEC Naija is a proposed premium digital cooperative for entertainers across Northern Nigeria. Its web application connects professional identity, cooperative membership, financial participation, artist networking and state-level coordination in one governed platform.

The experience must be neither a generic bank portal nor a typical entertainment blog. It should feel like an exclusive creative society: tactile, expressive and unmistakably professional, without compromising the safeguards required for financial systems.

- Three connected experiences: public website, member portal and central/state administrative portal.
- One type-safe Next.js application with relational Supabase PostgreSQL data and carefully segmented privileges.
- Financial integrity from day one: verified payment events, durable ledgers, reconciliation, refunds and audit records.
- Regulated lending, pooled investments and profit distribution must remain disabled until appropriate legal and operational approvals.

01 / Technology Stack

Layer	Chosen technology	Core responsibility
Language	TypeScript	End-to-end static type safety
Web framework	Next.js App Router	Rendering, routing, APIs and server services
UI	React	Reusable interactive views
Styling	SCSS Modules	Tactile custom design system
Database	Supabase PostgreSQL	Operational and financial data
Authentication	Supabase Auth	Identities, sessions and verification
Server logic	Next.js services / Edge Functions	Secure business processes
Media	Cloudinary	Artist images, banners and video
Protected files	Supabase Storage	Private ID and financial documents
Email	Resend + React Email	Branded transactional messages
Payments	Paystack or Flutterwave	NGN collections and permitted payouts
Forms	React Hook Form + Zod	Typed validation
Animation	Motion for React	Subtle UI movement
Charts	Recharts	Dashboard analytics
Icons	Lucide + custom SVG	Consistent visual system
Hosting	Vercel	Production deployment
Monitoring	Sentry	Error and performance visibility
Testing	Vitest + Playwright	Unit and browser testing

02 / Visual Identity & Skeuomorphic Art Direction

Theme: Modern Luxury Skeuomorphism. Combine black leather, warm lighting, brushed gold metal, tactile control panels and dimensional membership cards with modern spacing and accessible typography.

Original visual direction studies representing the four mood-board references: embossed leather cards, brass studio controls, luxury editorial paper and amber stage lighting.

Approved palette direction

OBSIDIAN	GRAPHITE	ANTIQUE GOLD	EMERALD	IVORY	SLATE
#111416	#20272B	#C8A45D	#116B50	#F5F0E6	#77838A

Color	Hex	Use
Obsidian Black	#111416	Primary background
Midnight Graphite	#20272B	Raised surfaces
Antique Gold	#C8A45D	Prestige accents

Color	Hex	Use
Deep Emerald	#116B50	Finance actions and growth
Warm Ivory	#F5F0E6	Content and text surfaces
Slate Grey	#77838A	Supporting text

Typography and interaction principles

- Headlines: Sora Bold; body and numeric content: Inter; editorial highlights: Playfair Display.
- Bevelled buttons, raised cards, inset search fields, metallic accents and consistent directional shadows.
- Reserve gold for membership identity and premium highlights; use emerald for financial controls.
- Artist imagery provides personality; avoid decorative overload, especially on finance screens.
- Support reduced motion, touch targets, high contrast, keyboard use and screen-reader labels.

03 / Platform Environments

Environment	Base URL	Responsibility
Public Website	necnaija.com	Brand, membership marketing, artist discovery, events, chapters and information
Member Portal	necnaija.com/dashboard	Membership identity, balances, loan applications, contributions, events and settings
Administrative Portal	admin.necnaija.com	National, state and committee workflows under explicit permissions

These environments may share a single Next.js repository and Supabase instance. A distinct admin hostname is useful for organisation but does not itself provide security: all protected actions must be authorised server-side and in database policy.

04 / Complete Screen Architecture

107 proposed screens across eight domains. The count includes major pages and distinct workflows, not every error state, modal or responsive layout.

A / Public Website / 18 screens

No.	Screen	No.	Screen
1	Homepage	2	About NEC Naija
3	Mission, Vision & Values	4	How the Cooperative Works
5	Membership Benefits	6	Membership Pricing
7	Member Directory	8	Public Artist Profile
9	State Chapters Directory	10	Individual State Chapter
11	Events Calendar	12	Event Details
13	News & Announcements	14	News Article
15	Leadership & Governance	16	Frequently Asked Questions
17	Contact & Support	18	Legal & Policies

B / Authentication & Onboarding / 11 screens

No.	Screen	No.	Screen
1	Create Account	2	Verify Email / OTP
3	Login	4	Forgot Password
5	Reset Password	6	Choose Professional Category
7	Personal Information	8	Professional Profile Setup
9	Identity Verification	10	Membership Payment
11	Application Status		

C / Member Dashboard / 16 screens

No.	Screen	No.	Screen
1	Dashboard Overview	2	Membership Card
3	My Profile	4	Edit Profile
5	Membership Status	6	Renew Membership
7	Contribution Overview	8	Make Contribution
9	Contribution History	10	Contribution Statement
11	Annual Withdrawal Request	12	Wallet Overview
13	Wallet Transactions	14	Distribution History
15	Notifications	16	Account Settings

D / Loans & Financial Services / 11 screens

No.	Screen	No.	Screen
1	Loan Overview	2	Loan Products
3	Loan Eligibility	4	New Loan Application
5	Loan Purpose & Budget	6	Document Upload
7	Guarantor Information	8	Collateral Information
9	Application Review	10	Loan Details & Repayments
11	Loan Repayment History		

E / Creative Network & Events / 13 screens

No.	Screen	No.	Screen
1	Member Network	2	Artist Discovery
3	Artist Profile	4	Events Overview
5	Submit Event	6	Event Budget & Details
7	Event Submission History	8	Event Application Status
9	Event Conflict Resolution	10	Community Announcements
11	Opportunities Board	12	Opportunity Details
13	Member Collaborations		

F / National Admin Portal / 20 screens

No.	Screen	No.	Screen
1	Admin Login	2	Executive Dashboard
3	Member Management	4	Member Verification
5	Membership Payments	6	Contribution Management
7	Overdue Accounts	8	Sanctions & Appeals
9	Withdrawal Approvals	10	Loan Applications
11	Loan Review	12	Loan Portfolio
13	Investment Management	14	Profit Distribution
15	Transaction Ledger	16	Events Administration
17	Chapter Management	18	Reports & Analytics
19	Roles & Permissions	20	System Settings

G / State & Committee Portal / 10 screens

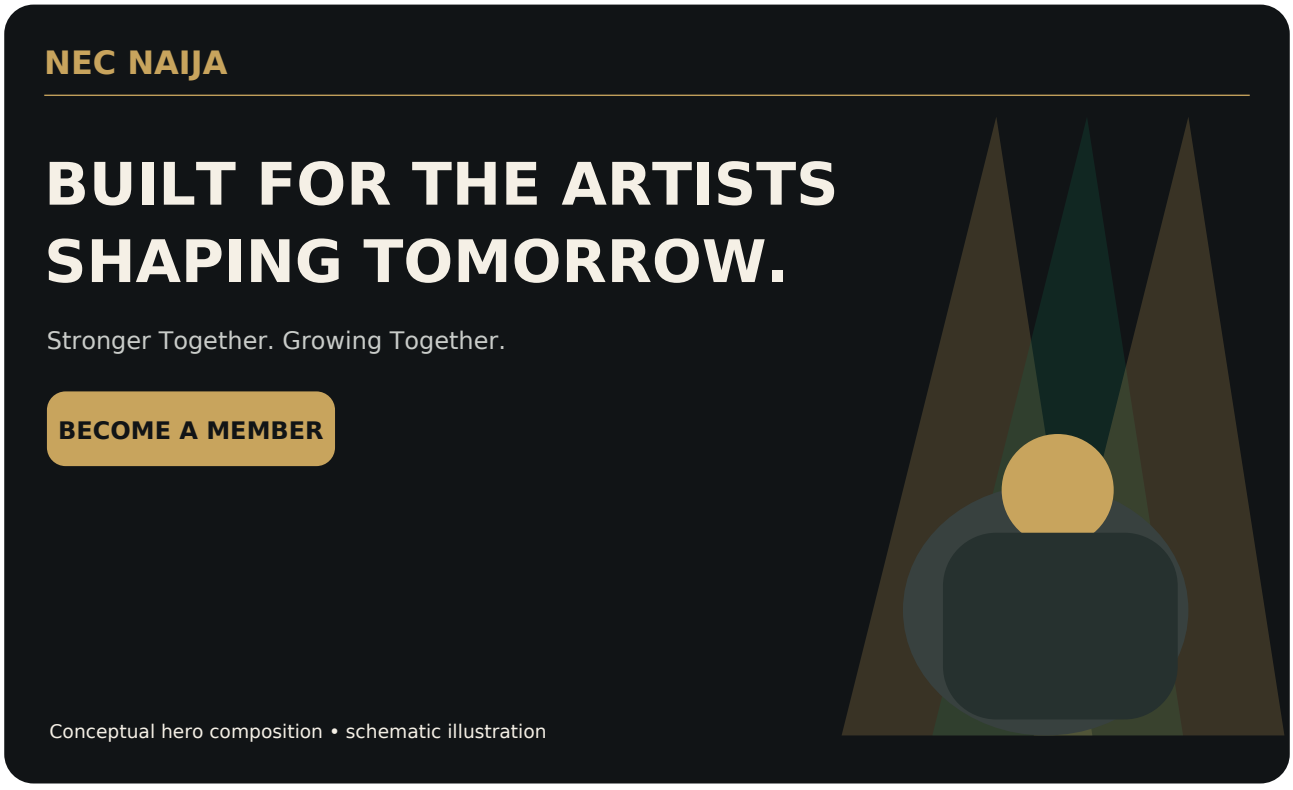

No.	Screen	No.	Screen
1	State Overview	2	Chapter Members
3	State Events	4	Event Review Workspace
5	Conflict Management	6	Chapter Announcements
7	State Reports	8	Local Member Support
9	Committee Task Queue	10	Chapter Settings

H / Support & Compliance / 8 screens

No.	Screen	No.	Screen
1	Help Centre	2	Submit Support Ticket
3	Ticket Details	4	Complaints & Appeals
5	Privacy & Data Requests	6	Security Settings
7	Activity / Session History	8	Service Notices

05 / Public Website & Homepage

The homepage should immediately establish who NEC Naija serves, why membership matters and how the cooperative is governed. Communicate shared financial strength while avoiding promises of guaranteed returns or invented metrics.

High-fidelity-inspired original schematic: midnight hero, antique-gold call-to-action and cinematic artist direction. Not a final production screenshot.

Homepage section order

01. Header: logo, About, Membership, Events, Chapters, Community, Login, Join
02. Hero: photography, short value proposition, registration CTA
03. Community Overview: Unite / Build / Grow explanation
04. Membership Benefits: financing eligibility, contributions, network and events

05. How It Works: register, verify, activate, contribute, access services
06. Membership Pricing: NGN 50,000 registration and NGN 25,000 monthly contribution; transparent renewal rules
07. Featured Creatives: artist cards, categories and states
08. Upcoming Events: approved public calendar
09. State Chapters: chapter selector and local information
10. Financial Transparency: reports and governance disclosures
11. News & Opportunities: industry updates and programmes
12. FAQ: common member and financial questions
13. Final Registration CTA
14. Footer: contact, policies, governance and socials

Do not publish fictitious membership figures, testimonials, investment results or guaranteed-return statements. Populate metrics only from verified records.

06 / Membership Registration & Onboarding

01	Create an account; confirm contact details
02	Capture legal identity and chapter information
03	Build stage name, profession and portfolio
04	Submit identity verification materials
05	Review bylaws, terms and privacy notices
06	Pay NGN 50,000 registration via processor
07	Application undergoes administrative review
08	Activate membership and issue digital card

Operational rules

- Support partial application recovery and expired sessions without duplicate charges.
- Store consent and policy version acknowledgements with timestamps.
- A paid application remains pending until eligibility and verification checks are complete.
- Record administrator decisions and request-for-information states in audit trails.
- Use a QR membership verification endpoint that discloses minimal public information.

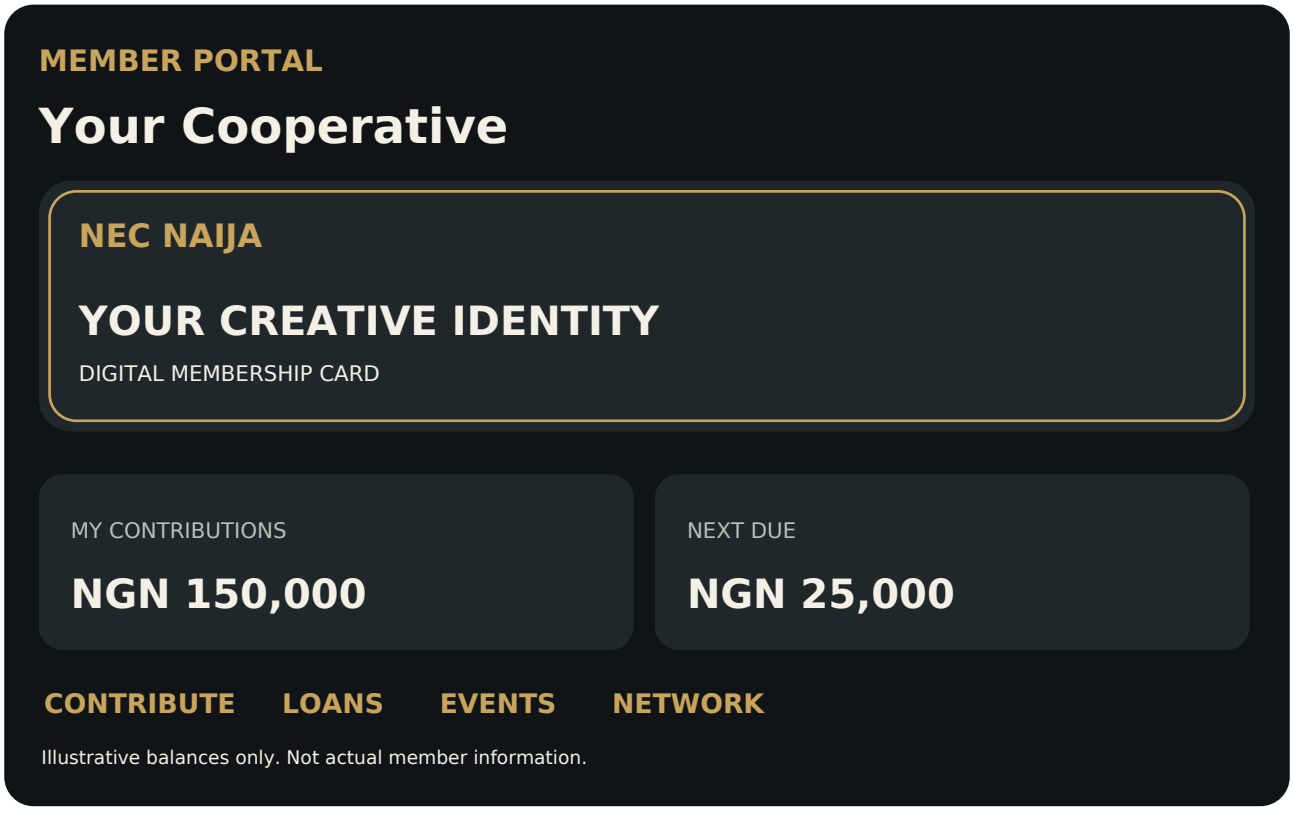

Digital membership card visual

Original NEC Naija card concept with embossed gold trim, black metallic face and schematic QR marker; sample details only.

07 / Member Dashboard

The member dashboard must offer meaningful weekly utility, not merely a registration receipt. It is the member’s cooperative identity and personal operations centre.

Original dashboard composition. The NGN 150,000 and NGN 25,000 figures are sample UI data, not real balances.

Area	Required capabilities
Overview	Membership health, contributions, notices, pending actions and renewal date
Membership	Card, status, ID, verification, renewal and download
Contributions	Monthly schedule, receipts, totals, arrears and statements
Wallet / Ledgers	Separate contribution, distribution and loan views
Events	Submit proposals, track committee decisions, resolve conflicts
Community	Opt-in member directory, artist discovery and collaboration
Notifications	Payments, reviews, reminders, sanctions, chapter meetings
Settings	Privacy, sessions, notifications, data requests, credentials

08 / Financial Services & Transaction Architecture

Financial balances must never be editable frontend values. Treat the database ledger, backed by settlement verification, as authoritative. Store all money in exact minor units or precise numeric types and use balanced postings for financial events.

Account / Ledger	Purpose
Registration billing	Non-refundable initial fee
Renewal billing	Annual renewal invoices
Member contribution liability	Refundable savings claims
Contribution receivables	Scheduled outstanding contributions
Loan principal	Amounts owed by borrowers
Loan charges	Authorised interest and fees
Profit distribution payable	Approved distributable entitlement
Distribution wallet	Member-facing distribution ledger view
Investment accounts	Capital, performance and realised returns

Account / Ledger	Purpose
Operating accounts	Income and organisational expenditure
Reserve accounts	Liquidity and financial buffers

Verified gateway transaction path

01 Member starts contribution, registration or repayment

02 Server issues unique payment intent / reference

03 Paystack or Flutterwave handles payment

04 Backend validates signed callback / webhook

05 Idempotent atomic ledger entry is posted

06 Reconcile provider settlement and issue receipt

Payment controls

- No crediting wallets merely from browser success pages.
- Webhooks must be signature checked, deduplicated and replay-safe.
- Maintain settlement reports, payment and payout reference IDs, errors and reconciliation jobs.
- Allow incomplete payment and expired intents to resolve without double charging.

End-of-year withdrawal

Request → eligibility review → outstanding obligations check → finance approval → payout authorisation → gateway or bank payout → reconciliation → settlement confirmation. Publish precise payout timing, allowed deductions and request states.

Loan modules

- Configurable loan products, lending limits and eligibility engine.
- Contribution and affordability review; supporting documentation, guarantors and collateral where appropriate.
- Officer and committee review, legal agreements, repayment schedules, arrears and restructuring.
- Portfolio reporting, credit concentration and recovery controls.
- All real lending disabled until legal permissions and approved operating policies are confirmed.

Investment and profit distribution

Support investment proposals, capital commitments, financial assessments, approvals, cash flows, losses, reserves, distributions and audit logs. Calculate distributable surplus only after legitimate expenses, losses, taxation and reserves. The proposed 70% member allocation is a target requiring formal policy and legal review, never a guaranteed return.

09 / State Chapter & Entertainment Management

Authority hierarchy: National Administration → State Chapters → Committees → Members. State permissions and access must be scoped to authorised chapter data.

Event application fields

- Title, category, creative participants, purpose and organisers.
- Date/time, location and venue, forecast attendance and target audience.
- Budget, proposed cooperative support and sponsorships.
- Artwork, media, compliance documentation, security and risk considerations.

Event workflow

01	Member drafts and submits at least 3 months ahead
02	Validate proposal completeness and timing
03	Check date, geography, audience and category overlap
04	State committee reviews within target 14-20 days
05	Approve, request edits, propose rescheduling or decline
06	Publish approved public events and notify organisers

The conflict checker should recommend human review rather than automatically stopping competitive events. Maintain review reasons, reviewer identity, version history, appeals and all status changes.

Artist directory and networking

Public profiles may show stage name, category, biography, portfolio media, verified member status, home chapter and optional contact links. Filters include profession, state, specialty and availability. Public visibility is opt-in; no member finance data appears on public profiles.

10 / Administrative Governance & Permissions

Role	Scope
Visitor	Public pages
Applicant	Own onboarding and status
Member	Own member services and records
State Coordinator	Authorised chapter activities
State Committee Member	Assigned reviews and governance
Credit Officer	Assigned lending assessments
Finance Officer	Approved accounting and payment operations
Compliance Officer	Identity / compliance workflows
Auditor	Read-only authorised reports and evidence
National Admin	Nationwide approved operations
Super Admin	Restricted platform configuration

This is 11 access profiles including visitor and applicant, of which 10 are authenticated internal/member roles when visitor is excluded. Apply granular permissions such as members.verify, events.review.state, loans.review, withdrawals.approve, reports.view.national and roles.manage rather than a single admin flag.

- Separate payment execution, approval and reconciliation responsibilities.
- Apply step-up verification to powerful changes and financial approvals.
- Prevent state officers from viewing records outside authorised states.
- Maintain immutable decision logs, traceable reviewer assignments and scoped administrative sessions.

11 / Supabase Database Architecture

Use UUID primary keys, explicit foreign keys, constraints, indexed search columns, timestamps and migration-controlled releases. The following working inventory describes approximately 70 tables before detailed normalisation.

Domain	Proposed tables
Identity	profiles, user_preferences, user_sessions, user_consents

Domain	Proposed tables
Membership	membership_applications, memberships, membership_renewals, member_categories, member_documents
Organisation	chapters, chapter_members, committees, committee_assignments, governance_terms
Permissions	roles, permissions, user_role_assignments, role_permissions
Billing	invoices, payment_intents, payments, payment_webhooks, refunds
Contributions	contribution_schedules, contributions, contribution_arrears, contribution_adjustments
Accounting	ledger_accounts, journal_entries, journal_lines, reconciliation_runs, payouts
Withdrawals	withdrawal_requests, withdrawal_reviews, withdrawal_settlements
Lending	loan_products, loan_applications, loan_documents, loan_guarantors, loan_collateral, loan_reviews, loans, loan_installments, loan_repayments
Investments	investment_proposals, investments, investment_cashflows, investment_valuations, distribution_periods, distribution_allocations
Entertainment	artist_profiles, artist_media, events, event_proposals, event_reviews, event_conflicts, event_participants
Community	opportunities, collaboration_requests, announcements
Support	support_tickets, support_messages, appeals, complaints
Communications	notifications, email_templates, email_deliveries
Compliance	verification_checks, audit_logs, policy_versions, data_requests
Platform	feature_flags, system_settings, scheduled_jobs, job_executions

Database protection rules

- Financial history is append-only; errors are corrected by reversing entries, not editing posted transactions.
- RLS enforces access to member records and scope-constrained chapter data; sensitive operations undergo independent server checks.
- Public artist media is served through Cloudinary, while ID and credit documents remain in private Supabase Storage.
- Connect payment, ledger and approval records through stable source references and consistent audit metadata.

12 / Integration Responsibilities

Provider	Required integration
Supabase	Auth, PostgreSQL, RLS, functions, private storage, cron/queues and database controls
Cloudinary	Artist galleries, event posters, image resizing, adaptive media and signed uploads
Resend	Verification, invoices, contributions, renewals, approvals, reminders and chapter messages
Paystack / Flutterwave	Registered fees, renewals, contributions, approved repayments and payouts
Vercel	App deployment, environment management and preview builds
Sentry	App exceptions and performance monitoring
Vitest / Playwright	Automated logic and cross-browser user journeys

Schedule monthly invoices, reminders, reconciliation, report generation and approved allocations as durable retriable jobs with execution histories. Avoid processing large mail batches or ledger-heavy computations within interactive page requests.

13 / Next.js Project Folder Architecture

```
nec-naija/
  src/
    app/
      (public)/ page.tsx about/ membership/ artists/ chapters/ events/ contact/
      (auth)/ login/ register/ onboarding/
      (member)/ dashboard/ membership/ contributions/ wallet/ loans/ events/ network/ settings/
      (admin)/ admin/
      api/ payments/ webhooks/ media/ reports/
      layout.tsx
    components/ ui/ skeuomorphic/ layout/ forms/ charts/
    features/ auth/ membership/ contributions/ accounting/ payments/ loans/
              investments/ events/ chapters/ notifications/
    lib/ supabase/ cloudinary/ resend/ payments/ auth/ validations/
    styles/ tokens.scss mixins.scss globals.scss effects.scss
    emails/ types/
  supabase/ migrations/ seed.sql functions/
  tests/ unit/ integration/ e2e/
  public/ icons/ branding/
  package.json
```

Keep business services (ledger posting, eligibility, approvals, reconciliation) in tested server-side domain modules, never in visual components.

14 / Five-Phase Development Roadmap

01 / Foundation, Brand & Architecture | Weeks 1-2

- SCSS tokens, brand guide, high-fidelity public/member/admin design templates
- Role and permissions matrix, entity-relationship model, product specification
- Supabase environments, migrations, CI, staging and test plan

02 / Public Website & Onboarding | Weeks 3-5

- Responsive marketing site, editorial content and public directory
- Authentication, recoverable multi-step onboarding, portfolio setup
- Verification submissions, registration gateway, approvals, digital cards
- Branded React Email / Resend templates

03 / Finance & National Administration | Weeks 6-9

- Member dashboard, contributions, renewal and billing
- Idempotent payments, balanced ledger and reconciled reports
- Arrears, sanctions, appeals and finance approvals
- Withdrawal intake, admin financial dashboards and statements

04 / Creative Network & Finance Modules | Weeks 10-13

- Artist network, opportunities and chapters
- Event submissions, clash detection, review calendar
- Loan, investment and distribution administration with feature flags
- Committee workflows and robust audit records

05 / Security, QA & Launch | Weeks 14-16

- Unit, integration, E2E, authorisation and payment recovery tests
- Accessibility, device compatibility, load checks and performance
- Backups, restore drills, monitoring and incident plans
- Operator training, production deployment, phased go-live

16 weeks is an indicative delivery plan for a properly resourced team. A solo developer, regulatory delays or additional scope can substantially extend delivery.

15 / Release Priorities

Release	Features	Conditions
MVP	Marketing website, membership onboarding, payment, card, basic profiles, contributions and administration	Approved legal terms and payment controls
v1.1	Chapters, event submissions, directory, renewals, reporting, complaints and withdrawals	Verified operational and financial controls
v2.0	Loan disbursement, pooled investments, approved distributions and advanced automation	Legal, governance and financial approval

Build the ledger as a core MVP dependency, even if higher-level finance modules launch later. Retrofitting bookkeeping after live payment collection creates avoidable risk.

16 / QA, Security & Acceptance Criteria

- Duplicate payment webhook deliveries never cause duplicate ledger credits.
- Incomplete payment never activates a membership; interrupted payment remains recoverable.
- RLS and server checks prevent chapter data leakage and client-side balance manipulation.
- Repayments only reduce loan obligations after verified posting.
- Expired memberships and missed contributions trigger policy-compliant workflow states.
- Three consecutively missed contributions trigger the configured sanction process and 30-day settlement window.
- Finance administrators cannot approve their own prohibited transaction.
- Retries never execute duplicate withdrawals or other payouts.
- Mandatory reserves and losses are applied before any profit allocation.
- Deleted media does not disclose private source documents or identity files.
- Registration works with keyboard navigation and assistive technology.
- Statements reconcile to bank/provider records; backups pass actual restoration exercises.

Set measurable uptime, performance, support, restoration and incident response targets in the deployment service level objectives.

17 / Deployment Environments

Environment	Suggested address	Use
Development	Local Next.js / Supabase	Feature implementation and developer testing
Staging	staging.necnaija.com	Internal QA, UAT and gateway sandbox
Production	necnaija.com / admin.necnaija.com	Real members and approved services

Separate service keys, PostgreSQL databases and payment credentials by environment. Use source-controlled migrations and PR review; validate schema upgrades on staging first.

18 / Legal, Governance & Launch Prerequisites

- Confirm cooperative registration, multi-state recognition and operating authority.
- Approve constitution, membership contract, renewals, contributions and withdrawal policy.
- Determine contribution ownership, safeguarding and liquidity policy.
- Approve borrowing limits and secure any necessary lending authorisation.
- Assess pooling of investments and profit sharing under applicable Nigerian law.
- Document payments, payout approvals, reconciliations and financial reserves.
- Formalise board and committee approval thresholds, conflicts and complaint appeals.
- Implement personal-data protection, ID retention and consent records.
- Set independent accounting audit and regular reporting obligations.
- Publish realistic financial risk statements; never promise fixed returns.

These checks are business launch gates, not optional UI tasks. Legal review should determine when regulated functions can be switched on.

19 / Final Delivery Package

- Production public website, member portal and multi-role admin platform.
- Figma high-fidelity responsive source and reusable design library.
- TypeScript / Next.js repository and controlled configuration examples.
- Supabase schema, migrations, ER diagram and security model.
- Permission matrix, workflows, gateway webhook integration specification.
- Cloudinary and Resend configurations and email templates.
- Automated tests, CI/CD process and release checklist.
- Administrator and member user manuals.
- Monitoring, backup, restoration and incident response guides.
- Business rule catalogue, launch checklist and handover documentation.

20 / Final Strategic Recommendation

NEC Naija should be developed as a creative cooperative ecosystem, not merely a membership brochure. Its differentiation is the connected relationship between an entertainer’s public professional identity, verified membership, financial participation and practical chapter opportunities.

Recommended build order: Skeuomorphic design system → Public website → Secure membership onboarding → Ledger and payment integrity → National and state administration → Artist/events network → Controlled loan and investment products.

Planning baseline: 107 screens; approximately 70 relational tables; 11 access profiles including unauthenticated visitors; 5 delivery phases; 3 releases. Screen and table counts are estimates requiring detailed implementation planning.
